intended for readers who have taken a basic heat transfer course and have a basic knowledge of thermodynamics heat transfer fluid mechanics and differential equations convective heat transfer third edition provides an overview of phenomenological convective heat transfer this book combines applications of engineering with the basic concepts o

this monograph presents the microscales of complex buoyant thermocapillary two phase reacting radiating pulsating etc turbulent flows and interprets heat and mass transfer correlations in terms of these scales the author introduces a general methodology for the development of microscales for complex turbulent flows then he provides by these scales a fundamental interpretation for a number of momentum heat and mass transfer correlations which are assumed to be empirical lastly he develops correlations in terms of these scales for environmentally and or technologically important problems related to buoyancy driven flows pulsating flows diffusion flows fires etc

the philosophy of the text is based on the development of an inductive approach to the formulation and solution of applied problems explores the principle that heat transfer rests on but goes beyond thermodynamics ideal as an introduction to engineering heat transfer
