engineering systems are highly distributed collective systems that have humans in the loop
engineering systems emphasize the potential of control and games beyond traditional applications
game theory can be used to design incentives to obtain socially desirable behaviors on the part of
the players for example a change in the consumption patterns on the part of the prosumers
producers consumers or better redistribution of traffic this unique book addresses the foundations
of game theory with an emphasis on the physical intuition behind the concepts an analysis of
design techniques and a discussion of new trends in the study of cooperation and competition in
large complex distributed systems

Lévy processes that is processes in continuous time with stationary and independent increments
form a flexible class of models which have been applied to the study of storage processes
insurance risk queues turbulence laser cooling and of course finance where they include
particularly important examples having heavy tails their sample path behaviour poses a variety of
challenging and fascinating problems which are addressed in detail

algebraic geometry and commutative algebra in honor of masayoshi nagata presents a collection of
papers on algebraic geometry and commutative algebra in honor of masayoshi nagata for his
significant contributions to commutative algebra topics covered range from weierstrass models and
endomorphism algebras of abelian varieties to the generic Torelli theorem for hypersurfaces in
compact irreducible hermitian symmetric spaces coarse moduli spaces for curves are also
discussed along with discriminants of curves of genus 2 and arithmetic surfaces comprised of 14
chapters this volume begins by describing a basic fibration as a weierstrass model with emphasis
on elliptic threefolds with a section the reader is then introduced to canonical bundles of analytic
surfaces of class VII₀ with curves lifting problem on ideal adically complete noetherian rings and
the canonical ring of a curve subsequent chapters deal with algebraic surfaces for regular systems
of weights elementary transformations of algebraic vector bundles the irreducibility of the first
differential equation of Painlevé and pure normal rings of dimension two the book concludes

with an assessment of the existence of some curves this monograph will be a useful resource for practitioners and researchers in algebra and geometry
